Flipped learning is a pedagogical approach that enables more opportunities for engaged and self-directed learning. Using digital media, faculty can maximize the fixed amount of classroom time available to teach medical students by creating short, recorded videos of direct instruction that are published online.

Before class, students are required to view these videos at their own pace and as often as necessary. Class time is then used for interactive learning, such as discussing case-studies, working in small groups, and engaging in problem solving activities.

This teaching intensive boot camp will introduce medical faculty to several technology tools (such as Audacity and Camtasia) and instructional strategies (such as peer teaching) for flipping the classroom learning environment. Additionally, a panel of faculty experts will discuss best practices and lessons learned using this approach in VCU School of Medicine courses.

By the end of this boot camp, participants will be able to:

- Examine the concept of flipped (or inverted) teaching as a method to increase student engagement in the medical education classroom.
- Design a flipped teaching session.
- Create a short, recorded lecture with easy-to-use digital media tools for audio, video and/or screen recording.

This boot camp will include presentations from:
Kenneth Warren, Ed.D., Instructional Technologist for Medical Education, SOM,
Teresa Carter, Ed.D., Associate Dean for Professional Instructional and Faculty Development, SOM, and
Staylor Anamuah-Mensah, M.A., Instructional Technologist, ALT Lab

Lunch will be provided. Following lunch, participants will engage in hands-on training using software applications that enable them to create and publish digital lectures for flipped learning. Laptops will be provided. Space is limited.

SOM Faculty Please RSVP here: https://redcap.vcu.edu/rc/surveys/?s=9KECYD8TH9
Note: MCV Campus Faculty outside of SOM can RSVP after April 20 if space permits.

This faculty development opportunity is provided by the
VCU School of Medicine Office for Faculty Affairs
